TITLE: A method for protecting metals from corrosion? Class 22, No. 176022

SOURCE: Byulleten' izobreteni i tovarnykh znakov, no. 21, 1965, 35

TOPIC TAGS: corrosion, corrosion protection, organic acid, carbon dioxide, hydro-carbon, asphalt, corrosion inhibitor

ABSTRACT: This Author Certificate presents a method for protecting metals from corrosion in a medium of low organic acids and carbon dioxide with the help of a corrosion inhibitor. To increase the degree of protection, hydrocarbon-soluble products of neutralizing acid asphalts are used as the inhibitor.

Title : Poisonous and Noxious Plants in the Summer Pastures of
Azerbaijan. (Preliminary Data).

Orig Pub : Tr. Azerb. s.-kh. in-ta, 1957, 4, 163-192

Abstract : On the pasture plots in the regions of Malyy Caucasus
and the regions of Bol'shoy Caucasus, poisonous and
noxious plants, consumption of which by cattle produce
toxic effects, were investigated. The alkaloid content
of the aerial and subsurface organs was determined by
field and laboratory methods. A list of 71 species of

plants is cited with the indication of the place and date of gathering, stage of development and the degree of alkaloid content according to the organs. Information is given according to families on the distribution, toxicity, consumption by animals and the alkaloid content of the plants studied. In a number of plants alkaloid property was discovered for the first time. It is recommended not to admit animals, especially young ones, to the pasture plots without first becoming familiar with the composition of the vegetation. With a considerable contamination with poisonous plants, it is recommended to mow and spade the plot until the formation of seeds in toxic plants, and to utilize the pasture in the period of greatly weakened or completely vanished toxicity in the plants. --
